Sustainability Mission Statement / Strategy Blefa

Sustainability Mission Statement of Blefa

Sustainability means promoting and living sustainable actions within Blefa in the sense of responsible handling of our environment and its natural resources. This encompasses our production, services, and products. Therefore, we report annually according to the environmental management system DIN EN ISO 14001.

In sustainable actions, social, ecological, and economic aspects should be as equal as possible to create fair, livable, and viable conditions and support present and future generations on this planet.

As a **socially** sustainable company, we aim to foster the loyalty and support of our employees, stakeholders, and the community in which we operate. We strive to achieve this through fair treatment of employees and conscientious actions in society at both local and global levels.

In terms of **ecological** sustainability, we aim to handle the environment responsibly to prevent the depletion or degradation of natural resources and ensure long-term environmental quality. This includes initiatives such as reducing carbon dioxide emissions, packaging waste, water consumption, or other environmental hazards.

To be sustainable, a company must generate profits. Only as a "healthy company" can Blefa invest in social and ecological measures and thus contribute to the quality of life of current and future generations. The areas covered by economic aspects include compliance with regulations, forward-looking corporate governance, and risk management.

	Sustainability Mission Statement	

Sustainability Strategy

- Monitoring the consumption of water, gas, and electricity.
- Prompt action when defined limits are exceeded through the integrated alarm system.
- Step-by-step plan for implementing the energy-saving program with the goal of CO2 neutrality by 2035.
- Generation and use of own energy through the installation of a PV system.
- Highlighting the added value of sustainable products to customers.
- Raw materials from companies whose sustainability strategy is convincing.
- Fair payment of employees who consistently work towards realizing our goals.
- Investment in environmental protection projects that are economically viable.
- Consistent training of employees on sustainability.
